HTML tags and their descriptions

1	<!--…-->	Describes a comment text in the source code.
2	<a>	It is used to create hyperlinks in HTML.
3	<address>	The <address> tag is used to define contact information for an author or an organization.
4	<article>	The <article> tag is used to define an independent, self-contained content. It is a semantic tag, which means that it conveys meaning to search engines and other software.
5	<audio>	The <audio> tag is used to embed audio content in HTML documents.
6	<b>	This tag is used to make text bold.
7	<blockquote>	The <blockquote> tag specifies a section that is quoted from another source.
8	<body>	The <body> tag defines the document's body. It contains all the contents of an HTML document, such as headings, paragraphs, images, hyperlinks, tables, lists, etc.
9	 	The tag inserts a single line break. It is an empty tag which means that it has no end tag.
10	<button>	The <button> tag defines a clickable button. It can be used to perform an action, such as submitting a form or opening a new window.
11	<del>	The <del> tag is used to mark text that has been deleted. It is usually rendered with a strikethrough line, but this can be customized using CSS.
12	<div>	The <div> tag is used as a container for HTML elements - which is then styled with CSS or manipulated with JavaScript.
13	<header>	The <header> element represents a container for introductory content or a set of navigational links.
14	<h1> to <h6>	These tags are used to define HTML headings. <h1> defines the most important heading. <h6> defines the least important heading.
15	<html>	The <html> tag represents the root of an HTML document. It is the container for all other HTML elements except the DOCTYPE tag.
16	<img>	The <img> tag is used to embed an image in an HTML page.
17	<link>	The <link> tag defines the relationship between the current document and an external resource. This tag is most often used to link to external style sheets or to add a favicon to your website. The <link> element is an empty element, it contains attributes only.
18	<menu>	The <menu> tag is used to create a menu. It can be used to create context menus, toolbars, and lists of commands.
19	<p>	The <p> tag defines a paragraph. Browsers automatically add a single blank line before and after each <p> element.
20	<select>	The <select> element is used to create a drop-down list. This element is most often used in a form, to collect user input. The <option> tags inside the <select> element define the available options in the drop-down list.
